

15 January 2015

## **New firmware release for iXA/iXA-R aerial camera systems** **Camera body version 2.3.52** **Sensor module version 5.15.12**

In order to determine if you have the latest sensor module and camera firmware versions installed in your camera, check the version by going to the About System screen:

### **iXA sensor module**

Go to Menu > About System

### **What's new:**

- Support for iXA-R cameras.
- GPS support:
  - Support for the IGI AEROcontrol GPS/IMU system.
  - Support for event message EVNTPA (Applanix).
  - Support for event message MARKPVA (NovAtel).
  - When camera is set to NMEA device, it only uses GPS data that was received within the previous one second. If information is older, it is discarded and no GPS information is added to the image.

### **Known Limitation:**

- Live View is not available on iXA-R cameras. If Live View is selected, video is not displayed.
- Multi-sync is currently not supported on the iXA-R.

## **Updating the sensor module and camera firmware**

See the Firmware Updater Application Installation Guide, which is available from the downloads section of [industrial.phaseone.com](http://industrial.phaseone.com).
